Ordinary Differential Operators Aiping Wang 2019-11-08 In 1910 Herman Weyl published one of the most widely quoted papers of the 20th century in Analysis, which initiated the study of singular Sturm-Liouville problems. The work on the foundations of Quantum Mechanics in the 1920s and 1930s, including the proof of the spectral theorem for unbounded self-adjoint operators in Hilbert space by von Neumann and Stone, provided some of the motivation for the study of differential operators in Hilbert space with particular emphasis on self-adjoint operators and their spectrum. Since then the topic developed in several directions and many results and applications have been obtained. In this monograph the authors summarize some of these directions discussing self-adjoint, symmetric, and dissipative operators in Hilbert and Symplectic Geometry spaces. Part I of the book covers the theory of differential and quasi-differential expressions and equations, existence and uniqueness of solutions, continuous and differentiable dependence on initial data, adjoint expressions, the Lagrange Identity, minimal and maximal operators, etc. In Part II characterizations of the symmetric, self-adjoint, and dissipative boundary conditions are established. In particular,

the authors prove the long standing Deficiency Index Conjecture. In Part III the symmetric and self-adjoint characterizations are extended to two-interval problems. These problems have solutions which have jump discontinuities in the interior of the underlying interval. These jumps may be infinite at singular interior points. Part IV is devoted to the construction of the regular Green's function. The construction presented differs from the usual one as found, for example, in the classical book by Coddington and Levinson.

On Poe Louis J. Budd 1993 From 1929 to the latest issue, American Literature has been the foremost journal expressing the findings of those who study our national literature. The journal has published the best work of literary historians, critics, and bibliographers, ranging from the founders of the discipline to the best current critics and researchers. The longevity of this excellence lends a special distinction to the articles in American Literature. Presented in order of their first appearance, the articles in each volume constitute a revealing record of developing insights and important shifts of critical emphasis. Each article has opened a fresh line of inquiry, established a fresh perspective on a familiar topic, or settled a question that engaged the interest of experts. "The articles in each volume are presented in the order of their first appearance in

American Literature and each opens a fresh line of inquiry, establishes a fresh perspective on a familiar topic, or settles a question that engaged the interest of experts. The selections are the most enduring work still useful for the study and teaching of important literary figures, or of an intellectual movement, motif, or genre. They represent the full range of thought from the scholarship that created the discipline and upon which much of the current work rests."--Dorys Crow Grover, *Western American Literature Partial Contents Poe as Social Critic (1934)/Ernest Marchand Edgar Allan Poe: A Crisis in the History of American Obscurantism (1937)/Yvor Winters Poe and the Chess Automaton (1939)/W. Powerful Learning Communities Oscar T. Lenning 2013-10-01 Learning communities have been demonstrated to dramatically improve student outcomes by engaging students in their learning. This book constitutes a comprehensive guide for readers who want a broad strategic view of learning communities, enabling them to identify which type of LC best meets the learning needs of their students, and the context and mission of their institution. It also provides the tools for planning, designing and implementing what the authors define as "powerful" LCs, and for understanding the assessment implications of their decisions. The potential power of LCs is realized through effective facilitation,

appropriate team-building activities, linkages, planning, and active collaboration that promotes learning of the group and the individual group members – all of which topics are covered in this volume. This book is organized around the three themes of setting the stage, designing an LC, and building or enhancing a powerful LC, and covers three types of learning communities – student, professional (faculty, staff), and institutional LCs concerned with student learning – providing a range of tools and forms to facilitate planning. The authors also address designing and maintaining hybrid and virtual LCs. This book is intended as a practical resource for anyone at any level in higher education who wants to champion, develop or redesign student or professional LCs, or even explore broader initiatives to develop their institution into a “learning organization”. Administrators in academic and student affairs will find guidance for setting appropriate policies and allocating resources. The book may also serve as a textbook for graduate courses in institutional leadership and policy studies, curriculum and instruction, student affairs, or assessment/evaluation.

Use of Humic Substances to Remediate Polluted Environments:

From Theory to Practice Irina V. Perminova 2005-03-24 Effective remediation of polluted environments is a priority in both Eastern and Western countries. In the U.S. and Europe, remediation costs generally exceed the net economic value of the land. As a result, scientists and engineers on both sides of the Atlantic have aggressively tried to develop novel technologies to meet regulatory standards at a fraction of the costs. In situ remediation shows considerable promise from both technical and economic perspectives. In situ technologies that deploy natural attenuating agents such as humic substances (HS) may be even more cost effective. Numerous studies have shown humics capable of altering both the chemical and the physical speciation of the ecotoxicants and in turn attenuate potential adverse environmental repercussions. Furthermore, the reserves of inexpensive humic materials are immense. Which suggests HS portend great promise as inexpensive amendments to

mitigate the environmental impacts of ecotoxicants and as active agents in remediation. To elucidate emerging concepts of humics-based remediation technologies, we organized the NATO Advanced Research Workshop (ARW), entitled "Use of humates to remediate polluted environments: from theory to practice", held on September 23-29, 2002 in Zvenigorod, Russia (see the web-site <http://www.mgumus.chem.msu.ru/arw>).

Distributed Constraint Problem Solving and Reasoning in Multi-agent Systems Weixiong Zhang 2004

Distributed and multi-agent systems are becoming more and more the focus of attention in artificial intelligence research and have already found their way into many practical applications. An important prerequisite for their success is an ability to flexibly adapt their behavior via intelligent cooperation. Successful reasoning about and within a multi-agent system is therefore paramount to achieve intelligent behavior. Distributed Constraint Satisfaction Problems (DCSPs) and Distributed Constraint Optimization (minimization) Problems (DCOPs) are perhaps ubiquitous in distributed systems in dynamic environments. Many important problems in distributed environments and systems, such as action coordination, task scheduling and resource allocation, can be formulated and solved as DCSPs and DCOPs. Therefore, techniques for solving DCSPs and DCOPs as well as strategies for automated reasoning in distributed systems are indispensable tools in the research areas of distributed and multi-agent systems. They also provide promising frameworks to deal with the increasingly diverse range of distributed real world problems emerging from the fast evolution of communication technologies. The volume is divided in two parts. One part contains papers on distributed constraint problems in multi-agent systems. The other part presents papers on Agents and Automated Reasoning.

The Perot Legacy Pat Benjamin 2013-02-12 In The Perot Legacy, political activist and Perot campaigner Pat Benjamin takes you inside Perot's campaign and tells the story of a citizen action movement that turned everyday folks into street fighters as the Republican and Democratic parties, together with the media, did everything possible to prevent Americans from having a third political choice. Based on this experience, Benjamin explains how citizens today can help return the power of political choice to the people and restore hope for a functioning federal government.
